

SoilFood™

A new approach
to soil nutrition

What is SoilFood™?

SoilFood™ is a concentrated soil conditioner that feeds beneficial soil microbes.

Fertiliser feeds plants.

**SoilFood™ feeds
the life in the soil.**

Why feed the soil microbiology?

Healthy soil biology helps plants access nutrients, improve soil structure and support stronger growth.

What is SoilFood™ made from?

Fresh organic food waste which is rapidly dehydrated and pasteurised at temperature.

How should gardeners use SoilFood™?

- ✓ Topdress soils before mulching.
- ✓ Apply to soils and potting mixes prior to sowing seed.
- ✓ Incorporate into soils that have seen a spade or fork.
- ✓ Apply under instant turf to help roots establish.

A little bit of SoilFood™ goes a long way

How much do I need?

Garden Beds = Apply 25-50g per m² and water in.

Pots & Containers = Mix through potting mix at the rate of 11g per kg or apply lightly to the surface.

Quick Reference Guide

Is it a fertiliser?

No. But it does contain nutrients that will improve plant growth and it will help release nutrients already in your soil.

Does it replace compost?

No. Compost adds bulk organic matter.
SoilFood™ is a concentrated immediate microbial food.
The two work very well together. Short & long term.

Is it safe for vegetables?

Yes. SoilFood is pathogen-tested and suitable for use in vegetable gardens.

Can it be used in pots?

Yes. Mix through potting mix or apply around established plants.

SoilFood™ vs Other Products

Product	Main Purpose
SoilFood™	Feeds beneficial soil microbes
Fertiliser	Feeds plants directly
Compost	Adds organic matter
Manure	Adds nutrients and organic matter

"SoilFood™ feeds the soil, not just the plant. It helps support beneficial microbes, improve soil health and get more from the nutrients already in your garden."
